ABSTRACT

A self-contained mobile stage system for outdoor performances that is transportable with a light tow vehicle, and with features for easy deployment by one person alone. The mobile stage trailer includes a chassis having a pair of decks, including an upper deck and a lower deck vertically spaced apart from the upper deck. A retractable hitch assembly is coupled with the chassis for coupling the trailer with the tow vehicle. A wing deck is coupled with the chassis at each lateral edge. The wing decks are selectively positionable in a first favored position proximate the upper deck of the chassis portion so that the upper deck and the wing decks together present an upwardly directed surface for performances. The wing decks are further selectively positionable in a second favored position for towing wherein the system presents a system width dimension generally equal to the width of the chassis alone.
